

Panel Session A6

Meeting the Nation's Needs for Water- Quality Information in the Next Decade:

Planned Contributions from the NAWQA Program

8th National Monitoring Conference
Portland, Oregon

May 1, 2012

Gary Rowe
U.S. Geological Survey, NAWQA Program
Denver, Colorado

NAWQA Program established by Congress in 1991 to answer:

- ✓ “What is the current quality of the Nation’s surface water and groundwater?” (**Status**)
- ✓ “Is water quality getting better or worse?” (**Trends**)
- ✓ “What are the natural and human factors that control water quality?” (**Understanding**)

Important Features of NAWQA

- **Operates perennially on a decadal time-scale**

Cycle 1 (1991-2001)

Cycle 2 (2002-2012)

Cycle 3 (2013-2023)

- **Consistent sampling and analytical methods**
- **Targeted design (based on land and water use)**
- **Multidisciplinary—hydrology, chemistry, ecology**
- **Multiple scales—local, regional, national**

51 NAWQA Study Areas, 1991 - 2001

The Quality of Our Nation's Waters

Pesticides in the Nation's Streams and Ground Water, 1992-2001

National Water-Quality Assessment Program

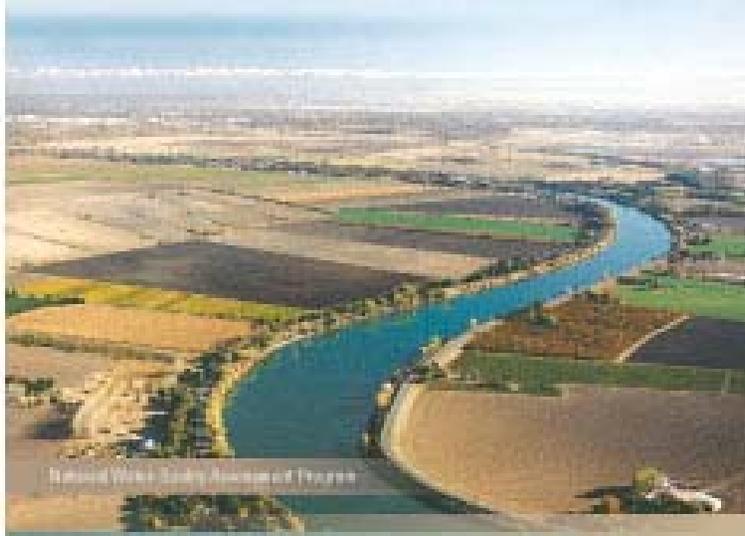

Circular 1291

U.S. Department of the Interior
U.S. Geological Survey

The Quality of Our Nation's Waters

Nutrients in the Nation's Streams and Groundwater, 1992-2004

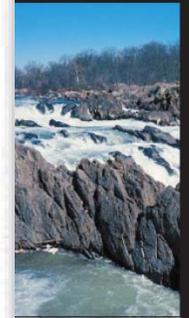

National Water-Quality Assessment Program

Circular 1291

U.S. Department of the Interior
U.S. Geological Survey

Quality in the
River Basin
a, Virginia, West Virginia
Columbia, 1992-96

Circular 1166

Transition from Cycle 1 to Cycle 2

Study units to...

Regional assessments

Status to...

Trends and Understanding

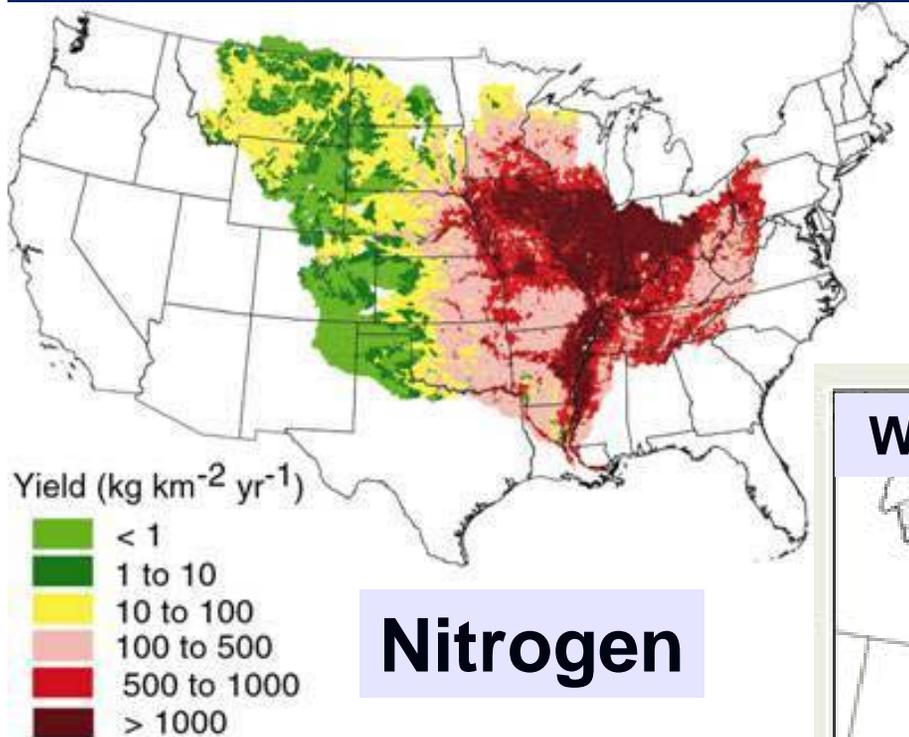

Monitoring to...

Monitoring and Modeling

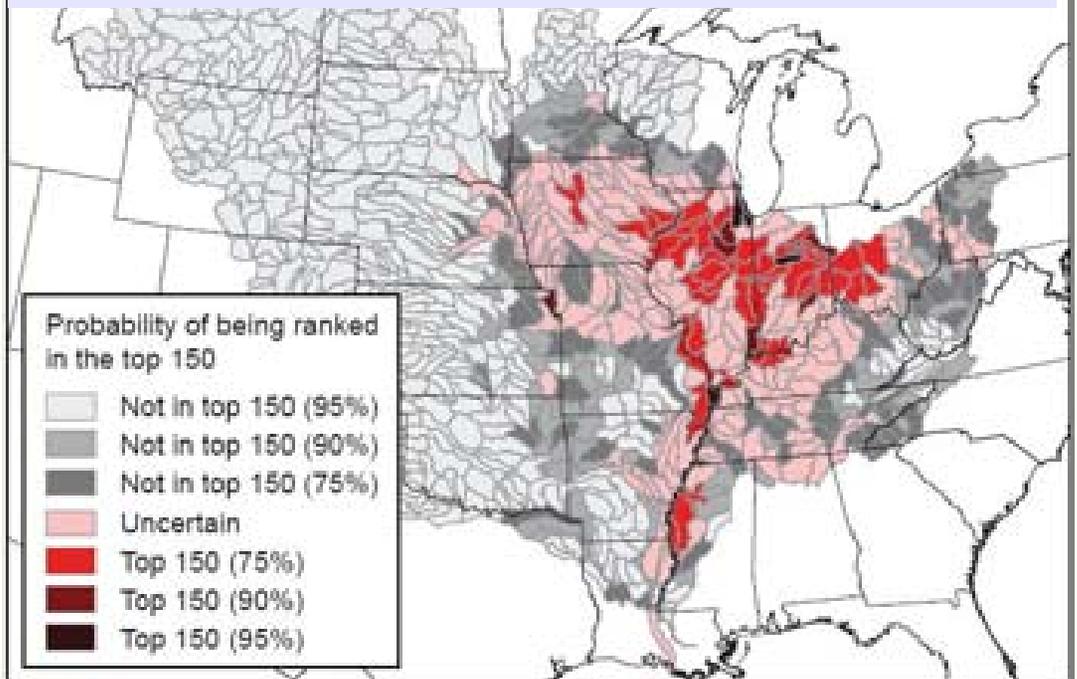

NAWQA Data...

NAWQA & Other Agency Data

Use of steady-state water-quality models like SPARROW to estimate nutrient delivery to Gulf of Mexico

Watershed ranking of nitrogen delivery

Priorities for Cycle 3

Nutrients

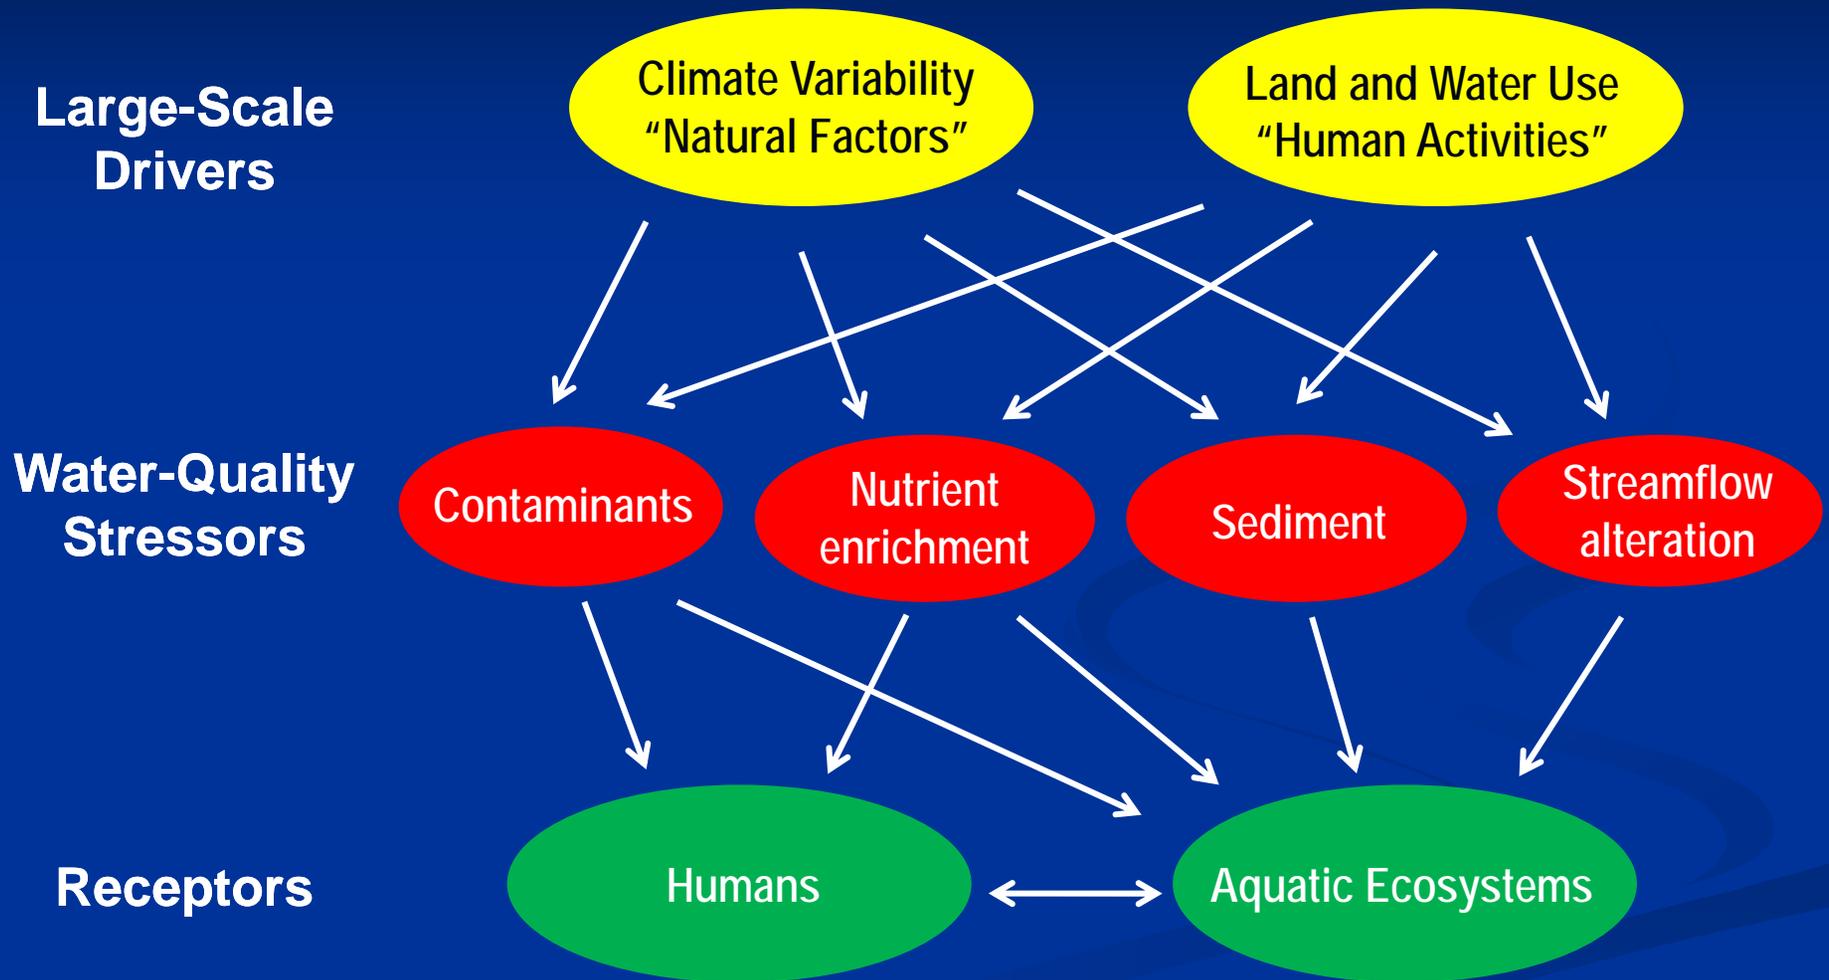

Contaminants

Sediment

Streamflow Alteration

Cycle 3 Design Framework

Cycle 3 Science Plan Goals

- **Goal 1** -Assess the current quality of the Nation's freshwater resources and how water quality is changing over time (*status and trends*)
- **Goal 2** -Evaluate how human activities and natural factors, such as land use and climate change, are affecting the quality of surface water and groundwater (*understanding causes*)
- **Goal 3** -Determine the effects of contaminants, excessive nutrients, sediment, and streamflow alteration on aquatic ecosystems (*assessing effects*)
- **Goal 4** -Predict the effects of human activities, climate change, and management strategies on water quality and ecosystem condition (*forecasting*)

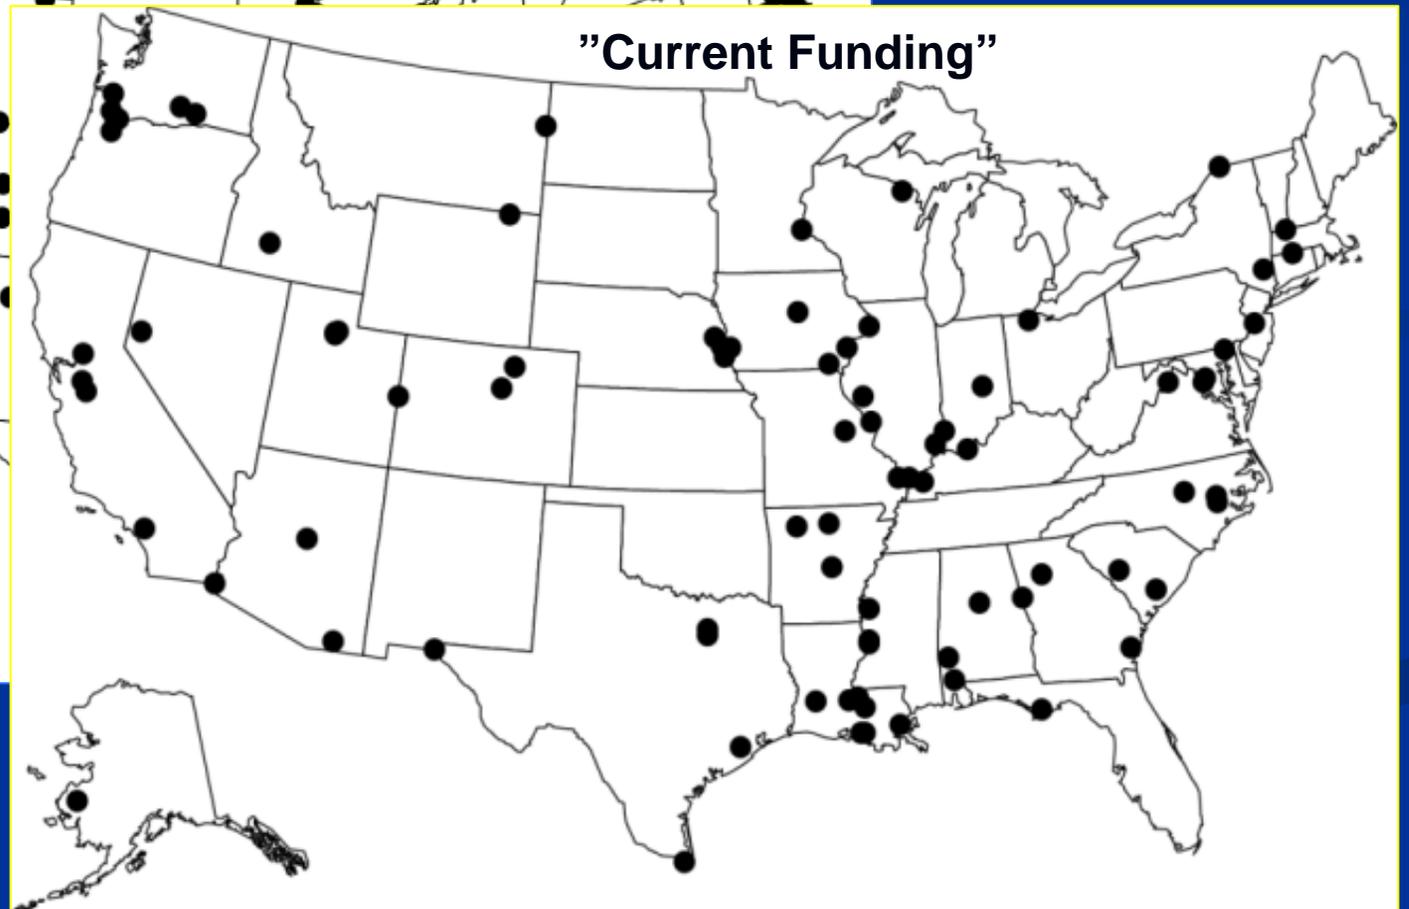

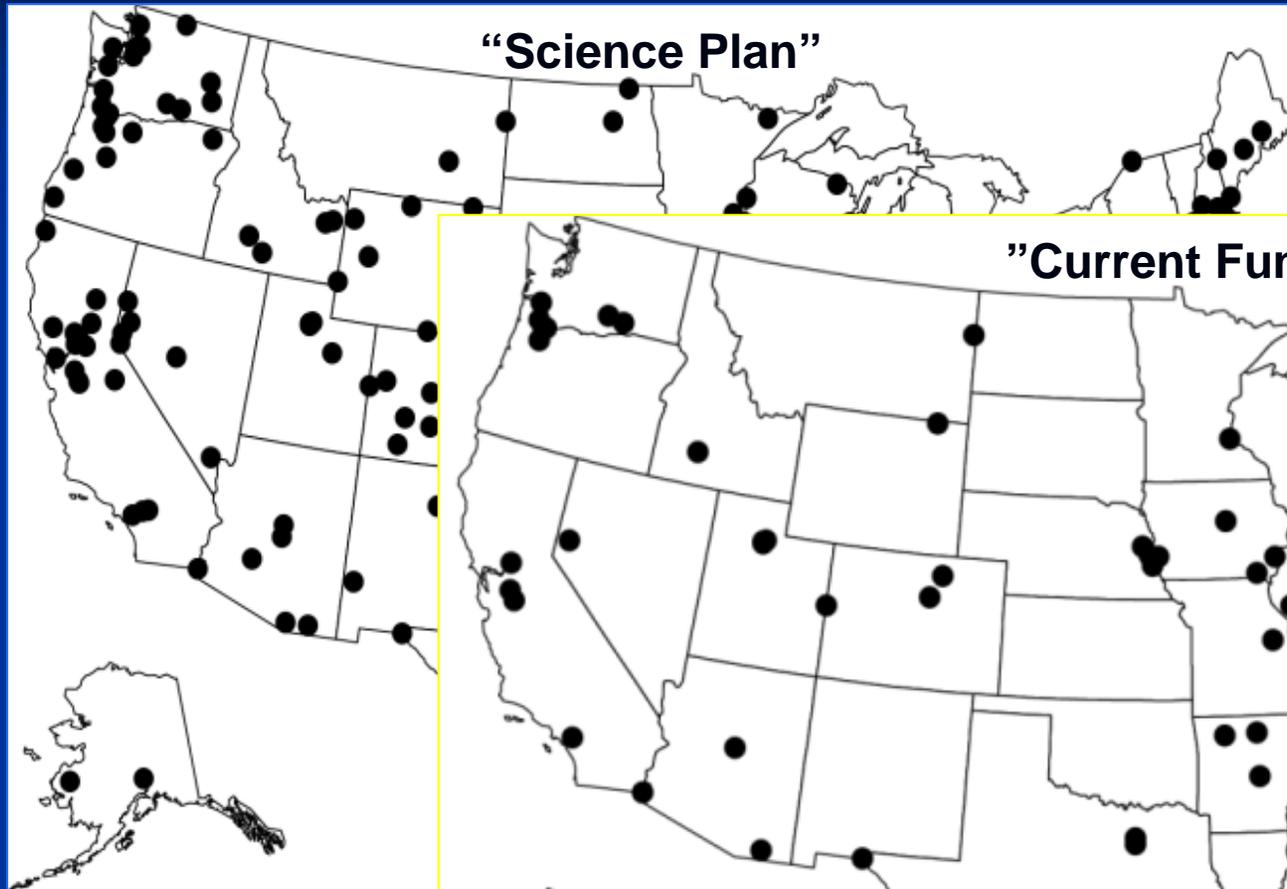

Expected Contributions

- ✓ Restoration of monitoring networks
- ✓ Reliable and timely trend analyses
- ✓ Models and decision-support tools
- ✓ Understanding relations between critical stressors and stream ecosystem condition
- ✓ Forecasts of future conditions

Two Budget Scenarios

- **“Science Plan” Scenario**
 - Developed to meet national needs identified by NAWQA stakeholders and NRC Committee
 - Full implementation cost would be about 4 times current (FY12) funding level (~\$63M)
- **“Current Funding” Scenario**
 - Starts at current funding level in 2013
 - Assumes flat budget over 10 years w/ 4% annual inflation rate
 - ~30% loss in spending power by 2023

Two Stream and River Water Quality Networks

Integration and Partnering are Critical

“National Assessment”

State and Local Agencies	NAWQA
Water Census (WaterSMART)	EPA (NARS, ORD, OST, OGWDW)
USDA (ARS, NRCS)	Groundwater Resources Program
National Monitoring Network	NOAA and other Federal Agencies

What You'll Hear about Today:

Approaches and Contributions

- **Surface Water Status & Trends Assessment** (Bob Gilliom)
 - **NARS Wadeable Streams Survey** (Ellen Tarquinio)
 - **Temperate Plains Synoptic Study** (Pete VanMetre)
- **Stressor Effects on Stream Ecosystems** (Mark Munn)
- **Groundwater Monitoring and Modeling** (Ken Belitz)
- **Integrated Watershed Studies** (Paul Capel)
- **Forecasting Studies** (Dave Wolock)
