Show: Sites with 5 or more events are green.

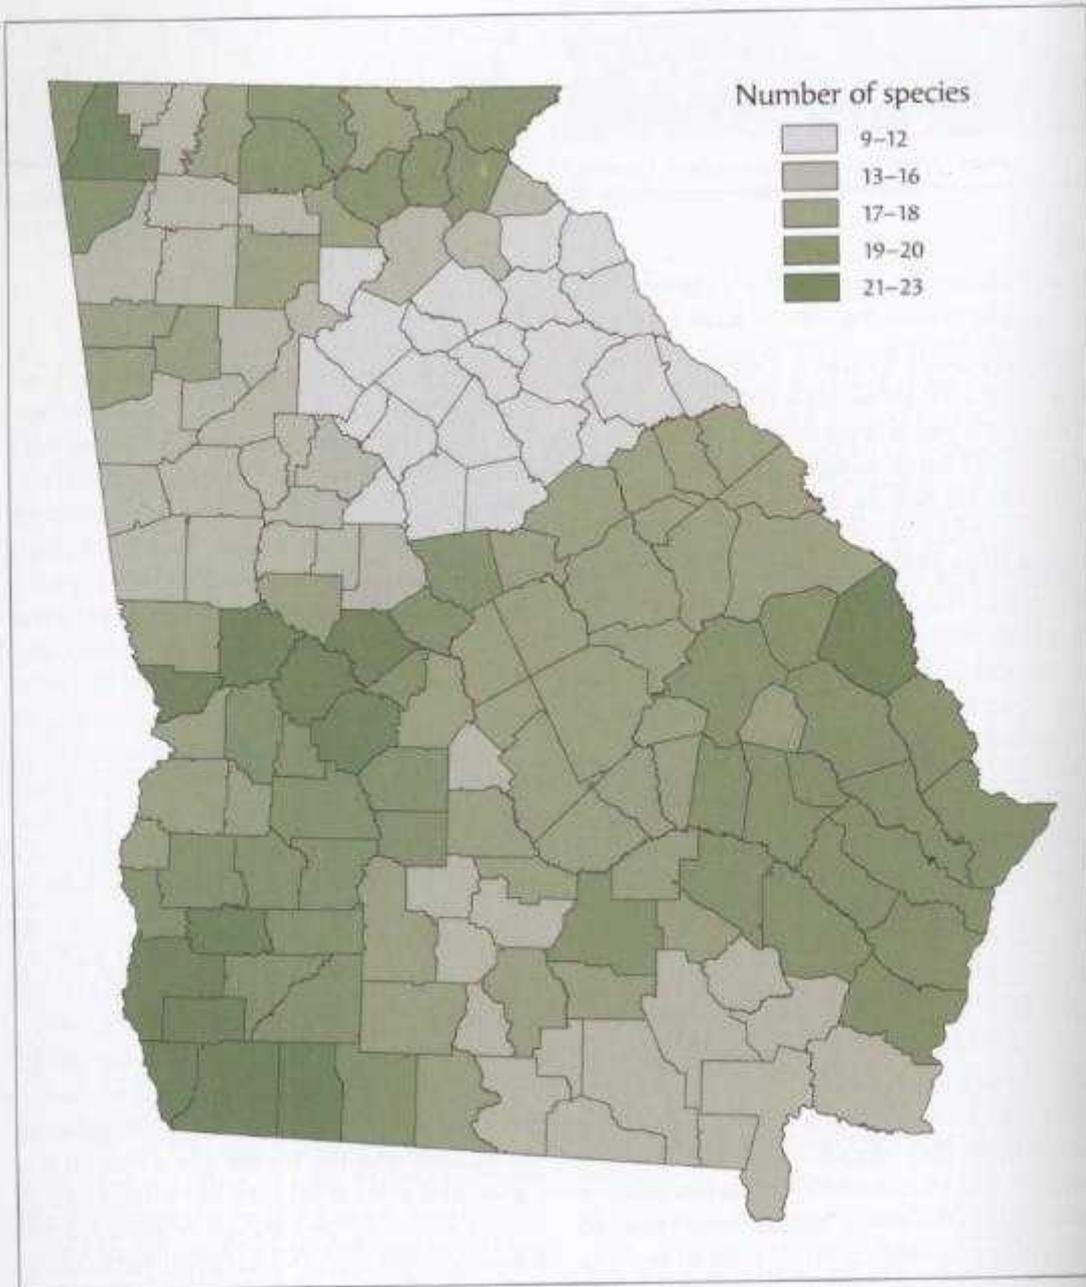

This database is supported in partnership with the University of Georgia, Marine and Cooperative Extension Services.

AAS Program Structure: **Quality Assurance Project Plan**

- QA/QC monitoring
 - Bacterial
 - Chemical
 - Macroinvertebrate
- Non-QA/QC monitoring
 - Visual/Physical
 - Watershed
 - Wetland
 - Amphibian**

Georgia's Diversity

Salamander Species Richness by County, Based on Predicted Ranges

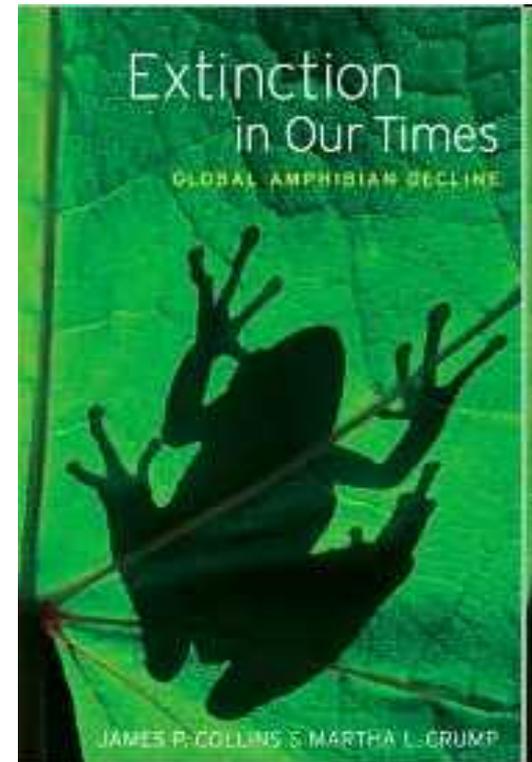

- 5 Physiographic Provinces
- 14 Major River Basins
- 32 species of frogs/toads
- 57 species of salamanders

Why Care About Amphibians?

Amphibians as a Target Group

- **SOME are sensitive to disturbances, but not necessarily a 'canary in the coal mine'**
- **Needs: Life History Information:**
 - Ranges
 - Pres/abs
 - Pollution tolerances

What Can I do?

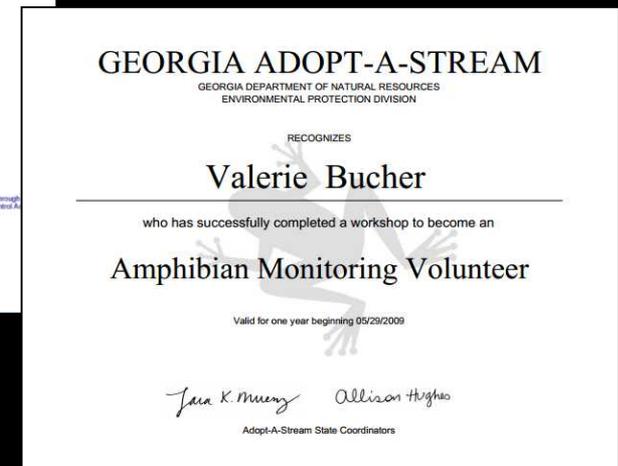

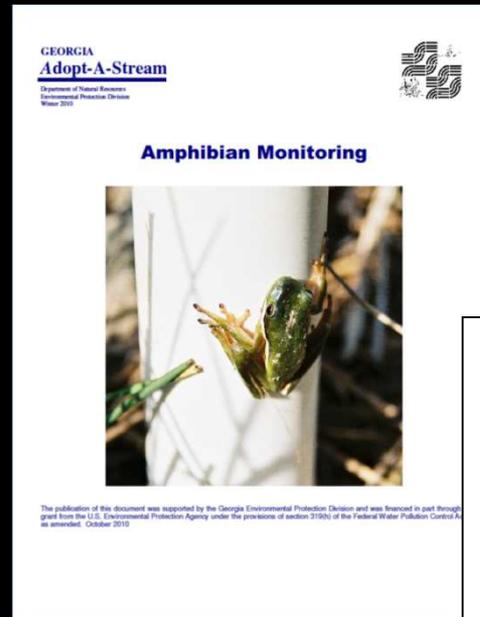

- **Protect Existing Habitat**
- **Landscape Naturally**
- **Be on the lookout for invasive species**
- **Create a pond or Toad Abode**
- **Help Scientists Collect Useful Information**

AAS Amphibian Workshop

➤ 3 hour training

- Life History
 - Challenges & opportunities
 - Identification
 - Photo Vouchers
 - Safe Handling
 - Methods/ datasheets
 - Manual
 - Invasive species
 - Malformations
- Frog calls
 - Field experience

Amphibian Survey Methods

1) Treefrog Adults: *Hyla* spp.

- PVC ground or tree pipes
- 6 Species in GA

Hyla squirella, Squirrel treefrog

Hyla cinerea, Green treefrog

Amphibian Survey Methods

2) Salamanders Adults & Larvae

-Artificial cover/ coverboards

-Aquatic macroinvertebrate collections (larvae)

-Families of Focus:

Ambystomatidae (mole)

Plethodontidae (lungless)

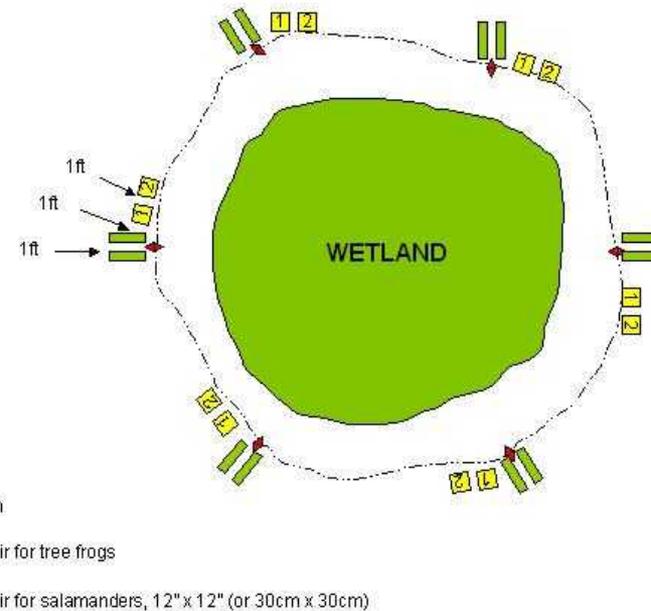

Salamandridae (newts)

Monitoring Design: Stream & Wetland

- Six stations within the adopted reach* or ecotone
- Check bimonthly
- At each station:
 - 1 pipe & board at 0ft
 - 1 pipe & board at 3ft
- Total of 12 pipes and 12 boards to monitor

Figure 2. Amphibian sampling framework at a wetland site. Comprised of six (6) evenly spaced stations around the perimeter of the wetland, within the ecotone (margin of the wetland where vegetation changes and that will not flood during rain events). Each station can consist of A) one (1) pair of ground pipes (both placed within a foot of each other), and/or B) one (1) pair of cover boards (both placed within a foot of each other). If both survey techniques are used (A&B), place cover board pair 1 ft (along the wetland perimeter; be consistent) from ground pipes.

Useful ID Guides in the Southeastern U.S.

Projects...

- **Testing Additional Methods:**
 1. Instream Salamanders: Bottle Traps/Leaf Packs
- **Partnerships:**
 - PARC's National Volunteer protocol development
 - GA EPD's Intensive Surveys Unit, wetland surveys
 - Georgia State Parks
 - GA DNR, invasive species ID: Cuban Treefrog
- **School groups: 'Educator's Guide' Activities**
- **Amphibian Workshop Trainers**

Invasive Cuban Treefrog in Coastal Georgia

The Cuban Treefrog (*Osteopilus septentrionalis*) is NATIVE to Cuba, the Cayman Islands and the Bahamas. They have been INTRODUCED in Florida, Hawaii and Texas, and **some individuals have been found on the Georgia Coast in Brunswick and Savannah.** They cause damage to the local animals by competing for food resources and also by eating other native frogs and lizards.

Cuban Treefrogs can be white, gray, green or brown, and can change colors. Some can have streaks while others are a solid color. All have large toepads.

What Can You Do?

If you suspect that you have found a Cuban Treefrog, send images of the individual to: John Jensen, Georgia Department of Natural Resources

Email: JOHN_JENSEN@DNR.STATE.GA.US

***Other information to collect:** Date and Location (Latitude/ Long)

Georgia is also home to several native treefrogs such as the ones below:

Green Treefrog, *Hyla cinerea*

Cope's Gray Treefrog, *Hyla chrysoscelis*

Barking Treefrog, *Hyla gratiosa*
