

Background...

How it Works...

What it Will Provide...

Western States Water Council Water Data Exchange (WaDE)

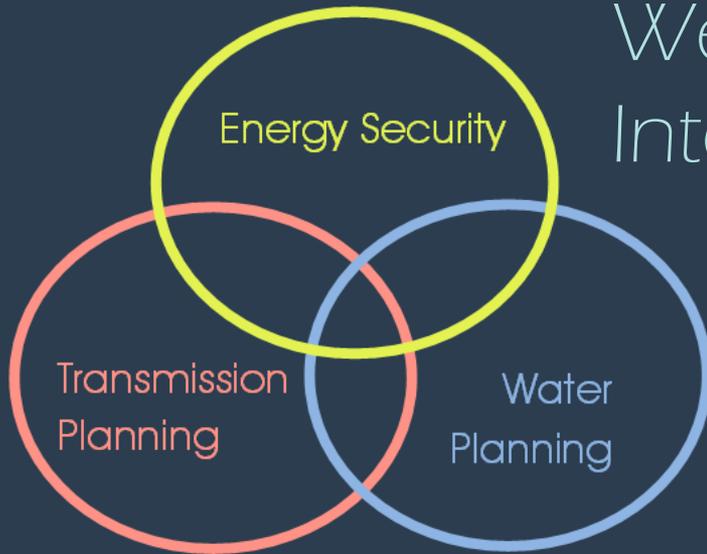

National Water Quality Monitoring Conference
Cincinnati, OH – April 28th – May 1st

Getting the States Plugged In!

Energy-Water Nexus

"Energy and Water in the Western and Texas Interconnects"

Argonne National Lab
Electric Power Research Institute
NREL, INL, Pacific Northwest

Data Sharing in the West

Water Needs and Strategies for a Sustainable Future: *Next Steps*

Western State Water Agencies

**Water Planning
is Highly
Variable...**

Streamgauge Data

Basin Budgets/Water Supply Estimates

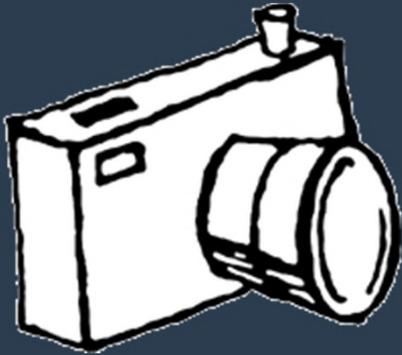

Water Availability Estimates

Diversions, Uses, and Return Flows

Allocations (Water Rights/Permits)

Water Data Exchange (WaDE)

What are the Big Picture Goals?

To better enable the states to share important water data with each other, the public and federal agencies.

ALSO, to improve the sharing of federal datasets with the states, which would facilitate their planning efforts.

On a Smaller Scale...

- 1) Get a handle on the variability between states
- 2) Develop a common data schema (common format for planning data)
- 3) Show how the data exchange will work
- 4) Encourage other partners to share data by adopting standardized formats

HOW DOES IT WORK?

Western Water Data Exchange (WaDE) Central Portal

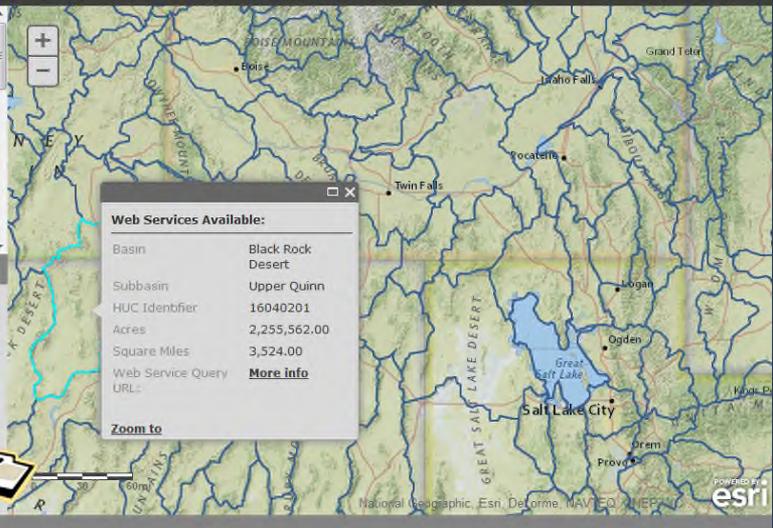

A mapping application for discovering water data web services hosted by the states, federal agencies and Sandia National Lab

An state agency sponsored initiative to better share water data was begun in 2008 and has taken on a greater importance in more recent years. Faced with the need to collaborate on regional watershed management issues and the growing requests for access to water data, state agencies have initiated the Water Data Exchange (WaDE) project.

This Central Portal for WaDE

LEGEND

Western 8-Digit HUC Layer

Web Services Available:	
Basin	Black Rock Desert
Subbasin	Upper Quinn
HUC Identifier	16040201
Acres	2,255,562.00
Square Miles	3,524.00
Web Service Query URL:	More info

WHAT WILL IT PROVIDE?

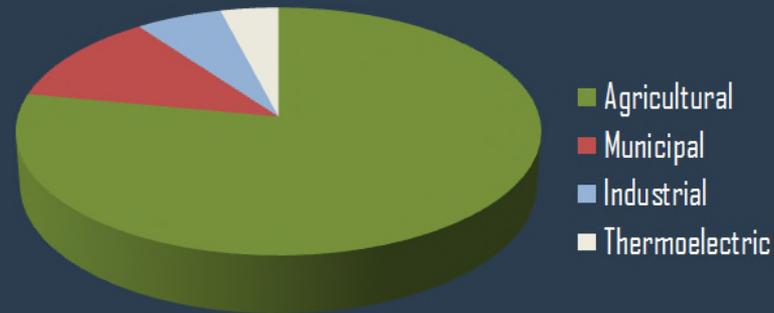

Summaries of Data

Availability Summary: 7,550 acre-feet

Water Use Summary: 2,850 acre-feet

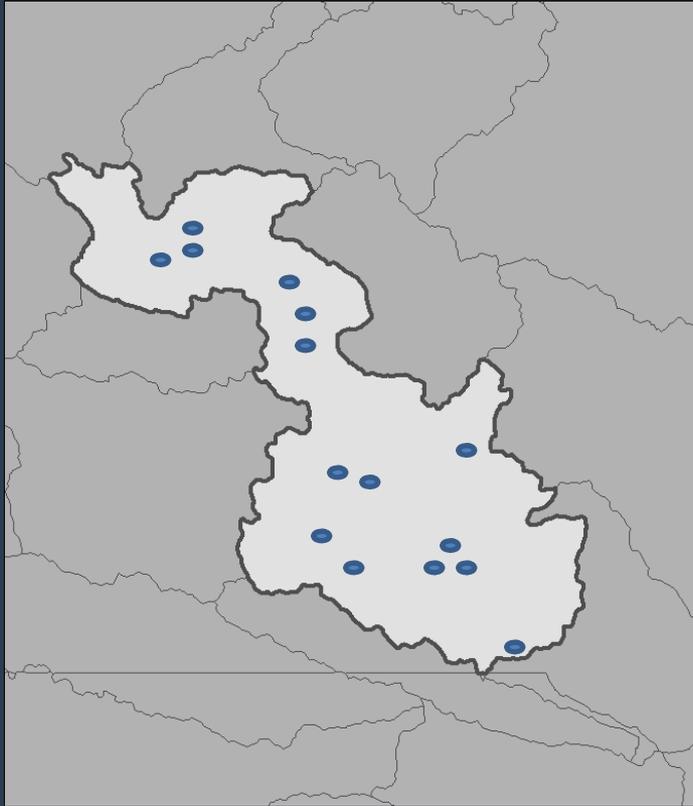

Water Supply Summary: 24,000 acre-feet

Regulatory & Allocation Summaries:

- Groundwater Management Areas
- % of Allocations by Beneficial Use Category

WHAT WILL IT PROVIDE?

FUTURE STEPS:
States plugged in,
grants, accessing
federal data too

More Detailed Data

Allocation Data

- Owner
- Beneficial Use
- Status
- Priority Date

Hydroinformatics and “Big Data”

How does WaDE fit in with CUASHI, WaterML, Etc.?

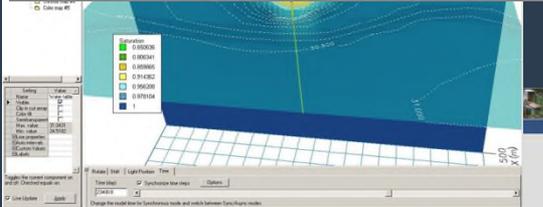

Policy (WGA)

Decision Applications (Sandia)

Data Sharing & Access (WaDE)

Review & Interpretation (State)

Sensor/Measurement Data
“BIG DATA” (NGWMN, NWIS)

WaDE Project Progress for 2013 -2014

Finalization of WaDE Version 0.2 schema

Finalization of WaDE SQL/Postgres Version 0.2
(Oracle is pending)

Finalization of WaDE web services code for
Version 0.2 for both SQL and Postgres access

- DEPLOY to the STATES...
- Publication of WaDE Project's State Capabilities Assessment Report – Final Draft - May of 2014

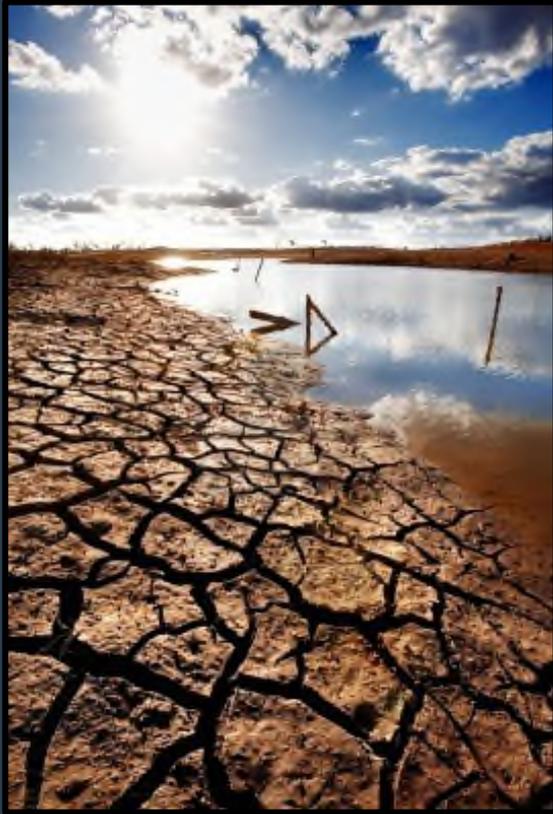

WaDE Deployment Progress for 2014

- Due to limited state resources, WSWC staff agreed to assist states as much as possible in securing funding for WaDE
 - Lead by TCEQ, WaDE-EN Partners are TX, OK, WA, OR, ID
 - Database installation, licensing, datasets, etc.
 - WSWC Coordination
 - Four volunteer pilot states that will proceed without funds (UT, NM, NE, WY)
 - UT and WY have begun the process!

WaDE Project Milestones – 2014 +

		2014		2015		2016	
		Jan	July	Jan	July	Jan	July
Development							
	Publication of State Capabilities Assessment Report						
	Finalize WaDE v.0.2 schema for deployment						
	Finalize WaDE v.0.2 databases and infrastructure components						
Deployment							
	Deployment with volunteer pilot states (UT, WY, NM, NE)						
	Deployment with NEIEN grant partners (TX, OK, WA, OR, ID)						
	Proceed with deployment for remaining WSWC members						
Phase II							
	Incorporation of state generated "hydrologic measurement" data						
	Engage with federal agencies for addition of federal web services						
	Add shared water planning datasets from federal partners						

WHY IS IT SO IMPORTANT?

With population growth, greater competition, energy security, food security, drought, climate change...

Federal agencies, farmers, journalists, politicians, academics... anyone who wants to know about their water...

... questions about water availability will only increase!
