NWQMC Webinar Series

The Assessment and Regulation of PFASs in New Hampshire's Drinking Water

Presented by

Brandon Kernen, New Hampshire Department of Environmental Services

Tuesday, March 28th, 2017, 1:00 – 2:00 p.m. EST

[Per- and Polyfluoroalkyl Substances](#) (PFASs) have been detected in drinking water and groundwater at multiple sites in New Hampshire contaminating hundreds of private drinking water wells and several public water supply sources that serve tens of thousands of people. The release mechanism of these compounds combined with their fate and transport properties, part-per-trillion analytical detection limits, updates to public health advisories for two PFASs and the lack of health risk information for 20 other PFASs have created an unprecedented challenge to environmental and public health professionals. Recommendations and outstanding issues pertaining to numerous regulatory, environmental, technical and social challenges have been identified.

New Hampshire in partnership with other state and federal agencies are rapidly determining the extent of the PFAS contamination, provide alternative drinking water and develop long-term mitigation strategies to address existing and prevent future groundwater contamination. These entities are also responding to public health concerns caused by the exposure to PFASs which has included blood testing thousands of people.

The webinar is free; pre-registration is required. Please login 10 minutes early.

To register for this session:

Go to <https://doilearn2.webex.com/doilearn2/onstage/g.php?MTID=e8c1214405af9aa1a352be9a390e5f970> and register.

You will receive a confirmation email with instructions for joining the session.
