

# River Corridor Restoration Conference 2011 – RCRC11

**Centro Stefano Franscini, Monte Verità, Ascona, Switzerland  
March 13–18, 2011**

Towards a mechanistic understanding of coupled hydrological and ecological processes in near-river corridors

This conference will bring together leading scientists from different scientific disciplines. We will stimulate scientific exchange and new collaborations among these fields. We envisage two aspects in particular that could profit greatly from such an exchange:

- (i) Development of combined hydro(geo)logical, ecological and biogeochemical methods to investigate river restoration projects, and
- (ii) Adaptation of experimental and field studies such as to be better suited for model development and validation.

## Subthemes

- Hydro-ecological interactions and ecosystem health
- Groundwater and hyporheic exchange
- River corridor biodiversity
- Hydrogeophysics
- River network modeling
- Flood protection
- Decision analysis
- Performance control of restoration projects
- Regulatory issues
- Climate and global change

**Deadline** for abstract submission is Friday, October, 15, 2010

**Registration** and more information on: [www.eawag.ch/rcrc11](http://www.eawag.ch/rcrc11)
