What is EnviroAtlas?

EnviroAtlas is a collection of interactive tools and resources that allows users to explore the many benefits people receive from nature, often referred to as ecosystem services. Key components of EnviroAtlas include the following:

- A multi-scaled Interactive Map with broad scale data for the lower 48 states and fine scale data for selected communities
- The Eco-Health Relationship Browser, which shows the linkages between ecosystems, the services they provide, and human health
- Ecosystem services information, GIS and analysis tools, and written resources

EnviroAtlas is a collaborative project developed by EPA, in cooperation with the US Geological Survey (USGS), the US Department of Agriculture's Natural Resources Conservation Service (NRCS) and Forest Service, and Landscape America. Produced by the collective effort of federal employees, contractors, and non-governmental organizations, EnviroAtlas develops and incorporates data from federal, state, community, and non-governmental organizations.
